

KIRANA STORE:

Kirana store is the online store for buying grocery according to the needs of the customer. We can use languages like java and MySQL to implement this.

- We can have 3 modules such as
 - ✓ Admin
 - ✓ Customer
 - ✓ Delivery

Admin:

- Admin can add items based on the category.
Example: Items such as biscuits, chips can be added to the category Snacks.
- Admin can also update and retrieve items.
- Admin can delete items
Example: If a particular item such as chips is out of stock he can delete that item.

Customer:

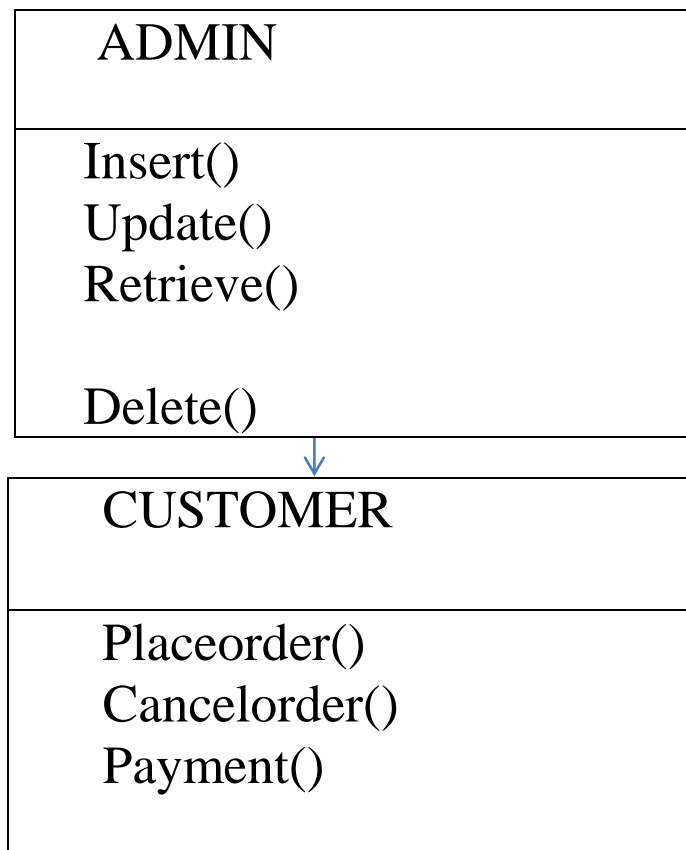

- Customer can add items to their cart.
- They can also delete items from their cart.

- They can place order and cancel order.
- Finally they can make payment.

Delivery:

- This is for the person who is going to handle the items to the customer.
